

JetView™ UV

HP12W Weatherable Polycarbonate

KEEP YOUR OUTDOOR PRINTS BRIGHT WITH  
TEKRA'S JETVIEW™ UV HP12W WEATHERABLE  
POLYCARBONATE...

**JETVIEW**

This dimensionally stable, transparent, matte film brings reliability and durability to your outdoor applications. With Tekra's proprietary print-receptive coating on the gloss side for a smooth print, you can achieve a stunning image without the glare. This is a great product to reverse print your image to have the hardcoated, UV-protected 1st surface help reduce chemical degradation, scratching and abrasions, while slowing yellowing and ink fading over time.

Our proprietary ink-receptive coating offers enhanced UV ink adhesion, ideal for adhesive-backed projects. Non-coated polycarbonate may print with UV inks, but the bond between the ink and substrate will be weak, keeping you from completing jobs that need durability or adhesives. JetView™ UV coated polycarbonate is your solution.

**Features:**

- Enhances the ink adhesion to the polycarbonate
- Scratch and abrasion resistance
- Chemical resistance
- UV Protection
- Passes the ASTM D3359 cross hatch tape test for ink adhesion
- Print tested on a wide variety of UV inkjet presses
- Available in sheets or rolls
- Free test samples available upon request

**Specifications:**

- 10, 15, mil gauges recommended for most applications
- Transparent, matte finish
- 48" wide web
- Available in roll or sheet form (custom sizing available)

**Applications:**

- Applications with increased sun or UV exposure
- Outdoor applications
- Industrial graphics
- Graphic overlays
- Durable Labels
