about our products
and services.

Ultraflote specializes in high-quality, innovative Tank Covers and Floating Roof Solutions, offering durable, low-maintenance systems for Municipal, Industrial, and Oil & Gas applications worldwide.

15,000

WORLDWIDE PROJECTS

53+

YEARS OF EXCELLENCE

100%

COMMITTED TO SUCCESS

ALUMINUM GEODESIC DOMES

Ultraflote's Ultradome™ provides industry-leading protection for municipal, industrial, and oil & gas storage needs. Its geodesic aluminum construction ensures durability, prevents contamination, and minimized maintenance costs. With customizable engineering solutions and flexible installation methods, Ultraflote delivers a reliable, long-lasting solution for tank enclosures worldwide.

INTERNAL FLOATING ROOF

Ultraflote's aluminum floating roofs and internal floating covers are engineered for maximum efficiency, safety, and cost savings. Our innovative designs prevent product evaporation, reduce pollution, and enhance operational safety, ensuring compliance with industry regulations. We offer fully customizable solutions tailored to specific needs, backed by expert engineering, durable materials, and a commitment to quality.

FLAT PANEL COVERS

Ultraflote's airtight, lightweight flat panel covers offer a reliable solution for preventing contamination and odors in municipal, industrial, and military tanks. Made from high-quality aluminum, these covers are easy to install, require minimal maintenance, and can be customized to fit various tank sizes and applications. Their design effectively traps vapors, reducing environmental impact while providing long-term protection for the contents of the tank.

CRYOGENIC SUSPENDED DECK

Ultradeck Cryogenic suspended decks provide a low-maintenance, non-corrosive, and easy-to-install storage solution for frigid liquids, combining the strengths of the Ultradome™ and Ultraflote® Cover with custom engineering and rapid, cost-effective installation.

Design, Engineering, Fabrication & Installation of Cover Solutions for Liquid & Dry Bulk Storage.

IN-HOUSE ENGINEERING

Every point of the design and development process is completed in-house. Our engineers can customize any product we produce to ensure it withstands all the variables in its ultimate destination, including weather and climate, environment and the type of liquid it is intended to protect. No matter the client's needs – municipal or industrial – we have all the resources necessary to meet, if not surpass, expectations before, during and after the installation process.

MANUFACTURING AND SHIPPING

All of Ultraflote's manufacturing and shipping is arranged in-house to ensure that our products go above and beyond the API standards that we ourselves helped set. Within our facilities, our manufacturers are able to fully translate the custom aluminum cover designs created by our expert engineers into reality. Our reach is global, and we owe it to our clients to do everything it takes to get their orders completed to their specifications and sent out in an expedient manner.

SALES AND REPAIR SUPPORT

Our expert team also provides assistance with maintenance or inspection of covers after an installation. We've got the personnel necessary to make any repairs, offer solutions and perform independent assessments before any local, state or federal safety or environmental inspections. Although Ultraflote products are built to last a lifetime, climate and environmental factors – as well as unforeseen disasters – can still lead to problems...problems which we are well-equipped to fix expediently and effectively.

INSTALLATION

Our options encompass a wide range of circumstances, from a domestic operation with a complete crew to a remote international locale capable of building and installing covers and domes from a comprehensive guide. Because of their modular designs, Ultraflote products come together quickly and efficiently.
